1.UseState Hook:

     - Create a React component with a button and a counter.

     - Implement the `useState` hook to update the counter when the button is clicked.

     - Display the updated counter value on the screen.

3.UseReducer Hook:

     - Develop an application for managing a shopping cart.

     - Implement the `useReducer` hook to manage the cart's state.

     - Enable users to add or remove items from the cart.
